

Advanced Inventory Management from Your Smartphone

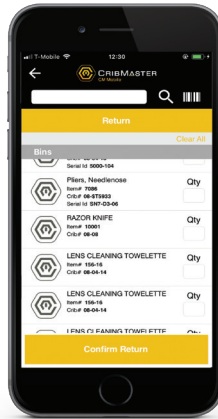

CM Mobile NG™ Keep CribMaster at Your Fingertips

Issue, return and scan items from your mobile device instead of the Tekvision or handheld scanners for on-the-go control over your inventory, and a lower-touch method to vending.

Issue and Return Inventory from Machines

Use your personal or work-issued mobile device to vend and return items to CribMaster machines using Remote Vend. This low-touch alternative to the Tekvision records the same transaction data while enabling a low-touch model to handling inventory.

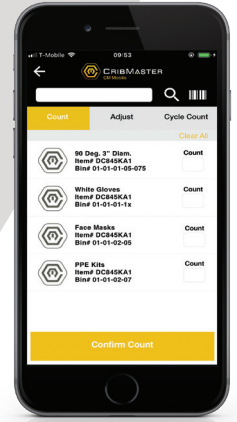

- Free functionality to all workers whose company has at least one full CM Mobile NG license and API. No cost or limit to adding users for Remote Vend!
- Low-touch alternative to the Tekvision
- Simple interactions make the experience fast & easy
- Records all transaction data for detailed reporting
- Vend remotely from any machine with ATR
- Compatible with Main or Aux units
- Not compatible with Express line

View Important Data in Real-Time While On-the-Go

You aren't always right in front of a machine or computer when you need important information regarding your inventory. CM Mobile NG makes it easy to find and review critical, commonly-used information like inventory levels, incoming orders, and bins that are past due for cycle counting from anywhere – all you need is a WiFi or cellular connection to get real-time, up-to-date information right to your phone.

- View and access data from multiple cribs
- Access critical, time-sensitive information like inventory levels and incoming orders
- Real-time data available wherever there's a WiFi or cellular connection

Track Inventory from Storerooms & Tool Cribs

CM Mobile NG allows you to carry the power of smart inventory management in your pocket. Replace manual pen and paper inventory tracking in your storeroom or tool crib with CM Mobile NG. Using CM Mobile NG to check items in and out of the tool crib eliminates the possibility of human error, increases efficiency, and ties all your inventory into a single, global database that's easy to manage.

- Smart inventory management without expensive equipment or new databases
- Log issued items by user
- Designate returned items as Unusable or Scrap to remove them from available stock
- Validate and update bin quantities with the Count feature
- Perform scheduled Cycle Counts
- Quickly reorder inventory by scanning a bin with your camera
- Initiate and complete transfers between cribs

Multi-Site Visibility from a Single Device

For managers responsible for multiple locations, an easy-to-access, single source of data is incredibly helpful. With CM Mobile NG, you can easily view data from multiple sites right in your app, so you can access critical information like inventory levels, incoming orders, and cycle counting status without having to travel between sites. CM Mobile NG will even help you plan the most efficient route between your facilities using location services, to maximize your time and help you be more efficient.

- View and access data across multiple sites
- Use location services to identify distance between sites, helping you plan an effective route for a replenishment run

STANLEY

CribMaster—a division of STANLEY®—is the global leader in inventory and asset management solutions for a broad range of industrial and manufacturing applications.
